

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1. (currently amended) A baby feeding bottle, comprising:
a dispenser body having an upper opening and a hollow interior;
a flexible fluid container supported by the dispenser body within the interior of the
dispenser body; and
an elongated flow tube having a first end disposed adjacent to the upper
opening of the dispenser body, and a second end disposed within the flexible fluid
container;
wherein the flow tube facilitates passage of fluid within the fluid container and
to the upper opening of the dispenser body.
2. (currently amended) The baby feeding bottle of claim 1, wherein the flow tube
includes ~~at least one aperture~~ a plurality of apertures along the flow tube through a
sidewall thereof.
3. (original) The baby feeding bottle of claim 1, including a casing which
engages the dispenser body to enclose the flexible fluid container.
4. (original) The baby feeding bottle of claim 1, wherein the flow tube and fluid
container are approximately the same length.
5. (original) The baby feeding bottle of claim 1, wherein the dispenser body
includes a mouthpiece in fluid flow communication with fluid contained within the
flexible fluid container.
6. (original) The baby feeding bottle of claim 1, wherein the flow tube is
connected to an interior sidewall of the fluid container.
7. (currently amended) The baby feeding bottle of claim 6, wherein the flow tube
includes ~~at least one aperture~~ a plurality of apertures along the flow tube through a
sidewall thereof.

8. (original) The baby feeding bottle of claim 1, wherein the flow tube extends centrally through the dispenser body and the fluid container.
9. (currently amended) The baby feeding bottle of claim 8, wherein the flow tube includes ~~at least one aperture~~ a plurality of apertures along the flow tube through a sidewall thereof.
10. (original) The baby feeding bottle of claim 8, including a substantially planar cap plate disposed adjacent to the upper opening, the cap plate supporting the flow tube and including an aperture in fluid flow communication with the flow tube.
11. (currently amended) The baby feeding bottle of claim 10, wherein the flow tube includes ~~at least one aperture~~ a plurality of apertures along the flow tube through a sidewall thereof.
12. (original) The baby feeding bottle of claim 8, wherein a second end of the flow tube includes a spacer.
13. (currently amended) A baby feeding bottle, comprising:
 - a dispenser body having an upper opening and a hollow interior;
 - a flexible fluid container supported by the dispenser body within the interior of the dispenser body; and
 - an elongated flow tube connected to an interior sidewall of the fluid container, the flow tube having a first end disposed adjacent to the upper opening of the dispenser body, and a second end disposed within the flexible fluid container;
wherein the flow tube facilitates passage of fluid within the fluid container and to the upper opening of the dispenser body and includes ~~at least one aperture~~ a plurality of apertures along the flow tube through a sidewall thereof, wherein the flow tube and fluid container are approximately the same length.
14. (original) The baby feeding bottle of claim 13, wherein the dispenser body includes a mouthpiece in fluid flow communication with fluid contained within the flexible fluid container.

15. (original) The baby feeding bottle of claim 14, including a casing which engages the dispenser body to enclose the flexible fluid container.
16. (currently amended) A baby feeding bottle, comprising:
a dispenser body having an upper opening and a hollow interior;
a flexible fluid container supported by the dispenser body within the interior of the dispenser body; and
an elongated flow tube extending centrally through the dispenser body and the fluid container, the flow tube having first end disposed adjacent to the upper opening of the dispenser body and a second end disposed within the flexible fluid container;
wherein the flow tube facilitates passage of fluid within the fluid container and to the upper opening of the dispenser body and includes at least one aperture a plurality of apertures along the flow tube through a sidewall thereof.
17. (original) The baby feeding bottle of claim 16, wherein the dispenser body includes a mouthpiece in fluid flow communication with fluid contained within the flexible fluid container.
18. (original) The baby feeding bottle of claim 17, including a casing which engages the dispenser body to enclose the flexible fluid container, wherein the flow tube and fluid container are approximately the same length.
19. (original) The baby feeding bottle of claim 17, including a substantially planar cap plate disposed adjacent to the upper opening, the cap plate supporting the flow tube and including an aperture in fluid flow communication with the flow tube.
20. (original) The baby feeding bottle of claim 19, wherein a second end of the flow tube includes a spacer.
